Warning notices: Before using this product, please read this manual carefully and keep it for future reference. The design and specifications are subject to change without prior notice for product improvement. Consult with your dealer or manufacturer for details. The diagram above is just for reference. Please take the appearance of the actual product as the standard.

## THANK YOU LETTER

Thank you for choosing Midea! Before using your new Midea product, please read this manual thoroughly to ensure that you know how to operate the features and functions that your new portable air conditioner offers in a safe way.

# SAFETY PRECAUTIONS

Read Safety Precautions Before Operation and Installation

To prevent death or injury to the user or other people and property damage, the following instructions must be followed. Incorrect operation due to ignoring of instructions may cause death, harm or damage.

## WARNING

This symbol indicates the possibility of personnel injury or loss of life.

## CAUTION

This symbol indicates the possibility of property damage or serious consequences.

## WARNING

- Installation must be performed according to the installation instructions. Improper installation can cause water leakage, electrical shock, or fire.
- Use only the included accessories and parts, and specified tools for the installation. Using non-standard parts can cause water leakage, electrical shock, fire, and injury or property damage.
- Make sure that the outlet you are using is grounded and has the appropriate voltage. The power cord is equipped with a three-prong grounding plug to protect against shock. Voltage information can be found on the nameplate of the unit.
- Your unit must be used in a properly grounded wall receptacle. If the wall receptacle you intend to use is not adequately grounded or protected by a time delay fuse or circuit breaker (the fuse or circuit breaker needed is determined by the maximum current of the unit. The maximum current is indicated on the nameplate located on unit), have a qualified electrician install the proper receptacle.
- Install the unit on a flat, sturdy surface. Failure to do so could result in damage or excessive noise and vibration.
- The unit must be kept free from obstruction to ensure proper function and to mitigate safety hazards.
- Do not modify the length of the power cord or use an extension cord to power the unit.
- Do not share a single outlet with other electrical appliances. Improper power supply can cause fire or electrical shock.
- Do not install your air conditioner in a wet room such as a bathroom or laundry room. Too much exposure to water can cause electrical components to short circuit.
- Do not install the unit in a location that may be exposed to combustible gas, as this could cause fire.  
The unit has wheels to facilitate moving. Make sure not to use the wheels on thick carpet or to roll over objects, as these could cause tipping.
- Do not operate a unit that it has been dropped or damaged.
- The appliance with electric heater shall have at least 1 meter space to the combustible materials.
- Do not touch the unit with wet or damp hands or when barefoot.
- If the air conditioner is knocked over during use, turn off the unit and unplug it from the main power supply immediately. Visually inspect the unit to ensure there is no damage. If you suspect the unit has been damaged, contact a technician or customer service for assistance.
- In a thunderstorm, the power must be cut off to avoid damage to the machine due to lightning.
- Your air conditioner should be used in such a way that it is protected from moisture. e.g. condensation, splashed water, etc. Do not place or store your air conditioner where it can fall or be pulled into water or any other liquid. Unplug immediately if it occurs.

- All wiring must be performed strictly in accordance with the wiring diagram located inside of the unit.
- The unit's circuit board(PCB) is designed with a fuse to provide overcurrent protection. The specifications of the fuse are printed on the circuit board, such as: T 3.15A/250V, etc.
- When the water drainage function is not in use, keep the upper and the lower drain plug firmly to the unit to get rid of choking. When the drain plug is not in use, keep it carefully to prevent children from choking.

## CAUTION

- This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.  
Children must be supervised around the unit at all times.(be applicable for other countries except the European Countries )
- If the supply cord is damaged, it must be replaced by the manufacturer,its service agent or similarly qualified persons in order to avoid a hazard.
- Prior to cleaning or other maintenance, the appliance must be disconnected from the supply mains.
- Do not remove any fixed covers. Never use this appliance if it is not working properly, or if it has been dropped or damaged.
- Do not run cord under carpeting. Do not cover cord with throw rugs, runners, or similar coverings. Do not route cord under furniture or appliances. Arrange cord away from traffic area and where it will not be tripped over.
- Do not operate unit with a damaged cord, plug, power fuse or circuit breaker. Discard unit or return to an authorized service facility for examination and/or repair.
- To reduce the risk of fire or electric shock, do not use this fan with any solid-state speed control device.
- The appliance shall be installed in accordance with national wiring regulations.
- Contact the authorised service technician for repair or maintenance of this unit.
- Contact the authorised installer for installation of this unit.
- Do not cover or obstruct the inlet or outlet grilles.
- Do not use this product for functions other than those described in this instruction manual.
- Before cleaning, turn off the power and unplug the unit.
- Disconnect the power if strange sounds, smell, or smoke comes from it.
- Do not press the buttons on the control panel with anything other than your fingers.
- Do not remove any fixed covers. Never use this appliance if it is not working properly, or if it has been dropped or damaged.
- Do not operate or stop the unit by inserting or pulling out the power cord plug.
- Do not use hazardous chemicals to clean or come into contact with the unit. Do not use the unit in the presence of inflammable substances or vapour such as alcohol, insecticides, petrol,etc.
- Always transport your air conditioner in a vertical position and stand on a stable, level surface during use.
- Always contact a qualified person to carry out repairs. If the damaged power supply cord must be replaced with a new power supply cord obtained from the product manufacturer and not repaired.
- Hold the plug by the head of the power plug when taking it out.
- Turn off the product when not in use.

## Electronic Work

### WARNING:

BEFORE PERFORMING ANY ELECTRICAL OR WIRING WORK, TURN OFF THE MAIN POWER TO THE SYSTEM.

NOTE: The cograps are for explanation purpose only. Your machine may be slightly different. The actual shape shall prevail.

### WARNING for Using R32 Refrigerant

- Do not use means to accelerate the defrosting process or to clean, other than those recommended by the manufacturer.
- The appliance shall be stored in a room without continuously operating ignition sources (for example: open flames, an operating gas appliance or an operating electric heater).
- Do not pierce or burn.
- Be aware that the refrigerants may not contain an odour.
- Appliance should be installed, operated and stored in a room with a floor area according to the amount of refrigerant to be charged. For specific information on the type of gas and the amount, please refer to the relevant label on the unit itself. When there are differences between the lable and the manual on the Min. room area description, the description on label shall prevail.
- Appliance shall be installed, operated and stored in a room with a floor area larger than 4 m<sup>2</sup>.  
Appliance shall not be installed in an unventilated space, if that space is smaller than 4 m<sup>2</sup>.
- No any open fire or device like switch which may generate spark/arcing shall be around appliance to avoid causing ignition of the flammable refrigerant used. Please follow the instructions carefully when storing or maintaining the appliance to prevent mechanical damage from occurring.

# A2L

**CAUTION:**  
**Risk of fire**  
**flammable materials**

**Explanation of symbols displayed on the unit**

**CAUTION**

This symbol shows that the operation manual should be read carefully.

**CAUTION**

This symbol shows that a service personnel should be handling this equipment with reference to the installation manual.

**CAUTION**

This symbol shows that information is available such as the operating manual or installation manual.

**⚠ WARNING**

- Servicing shall only be performed as recommended by the equipment manufacturer. Maintenance and repair requiring the assistance of other skilled personnel shall be carried out under the supervision of the person competent in the use of flammable refrigerants.
- DO NOT modify the length of the power cord or use an extension cord to power the unit.
- DO NOT share a single outlet with other electrical appliances. Improper power supply can cause fire or electrical shock.
- Please follow the instruction carefully to handle, install, clear, service the appliance to avoid any damage or hazard.
- When maintaining or disposing the appliance, the refrigerant shall be recovered properly, shall not discharge to air directly.
- Compliance with national gas regulations shall be observed.
- Keep ventilation openings clear of obstruction.
- The appliance shall be stored so as to prevent mechanical damage from occurring.
- A warning that the appliance shall be stored in a well-ventilated area where the room size corresponds to the room area as specified for operation.
- Any person who is involved with working on or breaking into a refrigerant circuit should hold a current valid certificate from an industry-accredited assessment authority, which authorises their competence to handle refrigerants safely in accordance with an industry recognised assessment specification. All training shall follow the ANNEX HH requirements of UL 60335-2-40.

Examples for such working procedures are:

- breaking into the refrigerating circuit;
- opening of sealed components;
- opening of ventilated enclosures.

## **1.Transport of equipment containing flammable refrigerants**

See transport regulations.

## **2.Marking of equipment using signs**

See local regulations.

## **3.Disposal of equipment using flammable refrigerants**

See national regulations.

## **4.Storage of equipment/appliances**

The storage of equipment should be in accordance with the manufacturer's instructions.

## **5.Storage of packed (unsold) equipment**

Storage package protection should be constructed such that mechanical damage to the equipment inside the package will not cause a leak of the refrigerant charge. The maximum number of pieces of equipment permitted to be stored together will be determined by local regulations.

## **6.Information on servicing**

1)Checks to the area

Prior to beginning work on systems containing flammable refrigerants, safety checks are necessary to ensure that the risk of ignition is minimised. For repair to the refrigerating system, the following precautions shall be complied with prior to conducting work on the system.

2)Work procedure

Work shall be undertaken under a controlled procedure so as to minimise the risk of a flammable gas or vapour being present while the work is being performed.

3)General work area

All maintenance staff and others working in the local area shall be instructed on the nature of work being carried out. Work in confined spaces shall be avoided. The area around the workspace shall be sectioned off. Ensure that the conditions within the area have been made safe by control of flammable material.

4)Checking for presence of refrigerant

The area shall be checked with an appropriate refrigerating detector prior to and during work, to ensure the technician is aware of potentially flammable atmospheres. Ensure that the leak detection equipment being used is suitable for use with flammable refrigerants, i.e. non-sparking, adequately sealed or intrinsically safe.

5)Presence of fire extinguisher

If any hot work is to be conducted on the refrigeration equipment or any associated parts, appropriate fire extinguishing equipment shall be available to hand. Have a dry powder or CO<sub>2</sub> fire extinguisher adjacent to the charging area.

6)No ignition sources

No person carrying out work in relation to a refrigerating system which involves exposing any pipe work that contains or has contained flammable refrigerant shall use any sources of ignition in such a manner that it may lead to the risk of fire or explosion. All possible ignition sources, including cigarette smoking, should be kept sufficiently far away from the site of installation, repairing, removing and disposal, during which flammable refrigerant can possibly be released to the surrounding space. Prior to work taking place, the area around the equipment is to be surveyed to make sure that there are no flammable hazards or ignition risks. No Smoking signs shall be displayed.

7)ventilated area

Ensure that the area is in the open or that it is adequately ventilated before breaking into the system or conducting any hot work. A degree of ventilation shall continue during the period that the work is carried out. The ventilation should safely disperse any released refrigerant and preferably expel it externally into the atmosphere.

#### 8)Checks to the refrigerating equipment

Where electrical components are being changed, they shall be fit for the purpose and to the correct specifications. At all times the manufacturer's maintenance and service guidelines shall be followed. If in doubt consult the manufacturer's technical department for assistance. The following checks shall be applied to installations using flammable refrigerants: the actual refrigerant charge is in accordance with the room size within which the refrigerant containing parts are installed; the ventilation machinery and outlets are operating adequately and are not obstructed; if an indirect refrigerating circuit is being used, the secondary circuit shall be checked for the presence of refrigerant; marking to the equipment continues to be visible and legible.

Markings and signs that are illegible shall be corrected; and refrigerating pipe or components are installed in a position where they are unlikely to be exposed to any substance which may corrode refrigerant containing components, unless the components are constructed of materials which are inherently resistant to being corroded or are suitably protected against being so corroded.

#### 9)Checks to electrical devices

Repair and maintenance to electrical components shall include initial safety checks and component inspection procedures. If a fault exists that could compromise safety, then no electrical supply shall be connected to the circuit until it is satisfactorily dealt with. If the fault cannot be corrected immediately but it is necessary to continue operation, an adequate temporary solution shall be used.

This shall be reported to the owner of the equipment so all parties are advised.

Initial safety checks shall include: That capacitors are discharged: this shall be done in a safe manner to avoid possibility of sparking; that there no live electrical components and wiring are exposed while charging, recovering or purging the system; that there is continuity of earth bonding.

### **7.Sealed electrical components shall be replaced.**

1)During repairs to sealed components, all electrical supplies shall be disconnected from the equipment being worked upon prior to any removal of sealed covers, etc. If it is absolutely necessary to have an electrical supply to equipment during servicing, then a permanently operating form of leak detection shall be located at the most critical point to warn of a potentially hazardous situation.

2)Particular attention shall be paid to the following to ensure that by working on electrical components, the casing is not altered in such a way that the level of protection is affected. Check for damage to cables, excessive number of connections, terminals not made to original specification, damage to seals, incorrect fitting of glands, etc. Ensure that apparatus is mounted securely. Ensure that seals or sealing materials have not degraded such that they no longer serve the purpose of preventing the ingress of flammable atmospheres. Replacement parts shall be in accordance with the manufacturer's specifications.

NOTE: The use of silicon sealant may inhibit the effectiveness of some types of leak detection equipment. Intrinsically safe components do not have to be isolated prior to working on them.

### **8. Intrinsically safe components must be replaced.**

Do not apply any permanent inductive or capacitance loads to the circuit without ensuring that this will not exceed the permissible voltage and current permitted for the equipment in use. Intrinsically safe components are the only types that can be worked on while live in the presence of a flammable atmosphere. The test apparatus shall be at the correct rating. Replace components only with parts specified by the manufacturer. Other parts may result in the ignition of refrigerant in the atmosphere from a leak.

## **9. Cabling**

Check that cabling will not be subject to wear, corrosion, excessive pressure, vibration, sharp edges or any other adverse environmental effects. The check shall also take into account the effects of aging or continual vibration from sources such as compressors or fans.

## **10. Detection of flammable refrigerants**

Under no circumstances shall potential sources of ignition be used in the searching for or detection of refrigerant leaks. A halide torch (or any other detector using a naked flame) shall not be used.

The following leak detection methods are deemed acceptable for systems containing flammable refrigerants. Electronic leak detectors shall be used to detect flammable refrigerants, but the sensitivity may not be adequate, or may need re-calibration. (Detection equipment shall be calibrated in a refrigerant-free area.) Ensure that the detector is not a potential source of ignition and is suitable for the refrigerant used. Leak detection equipment shall be set at a percentage of the LFL of the refrigerant and shall be calibrated to the refrigerant employed and the appropriate percentage of gas (25 % maximum) is confirmed. Leak detection fluids are suitable for use with most refrigerants but the use of detergents containing chlorine shall be avoided as the chlorine may react with the refrigerant and corrode the copper pipe-work. If a leak is suspected, all naked flames shall be removed/ extinguished. If a leakage of refrigerant is found which requires brazing, all of the refrigerant shall be recovered from the system, or isolated (by means of shut off valves) in a part of the system remote from the leak.

Removal of refrigerant shall be according to Removal and evacuation.

## **11. Removal and evacuation**

When breaking into the refrigerant circuit to make repairs—or for any other purpose - conventional procedures shall be used. However, for flammable refrigerants it is important that best practice be followed, since flammability is a consideration.

The following procedure shall be adhered to:

-Safely remove refrigerant following local and national regulations;

-Evacuate;

-Purge the circuit with inert gas (optional for A2L);

-Evacuate (optional for A2L);

-continuously flush or purge with inert gas when using flame to open circuit; and  
-open the circuit.

The refrigerant charge shall be recovered into the correct recovery cylinders if venting is not allowed by local and national codes. For appliances containing flammable refrigerants, the system shall be purged with oxygen-free n flammable refrigerants. This process might compressed air or oxygen shall not be used for purging refrigerant systems.

For appliances containing flammable refrigerants, refrigerants purging shall be achieved by breaking the vacuum in the system with oxygen-free nitrogen and continuing to fill until the working pressure is achieved, then venting to atmosphere, and finally pulling down to a vacuum (optional for A2L). This process shall be repeated until no refrigerant is within the system (optional for A2L). When the final oxygen-free nitrogen charge is used, the system shall be vented down to atmospheric pressure to enable work to take place. The outlet for the vacuum pump shall not be close to any potential ignition sources, and ventilation shall be available.

## **12. Charging procedures**

In addition to conventional charging procedures, the following requirements shall be followed. Ensure that contamination of different refrigerants does not occur when using charging equipment. Hoses or lines shall be as short as possible to minimise the amount of refrigerant contained in them. Cylinders shall be kept in an appropriate position according to the instructions. Ensure that the refrigeration system is earthed prior to charging the system with refrigerant. Label the system when charging is complete (if not already). Extreme care shall be taken not to overfill the refrigeration system. Prior to recharging the system it shall be pressure tested with OFN. The system shall be leak tested on completion of charging but prior to commissioning. A follow up leak test shall be carried out prior to leaving the site.

### **13.Decommissioning**

Before carrying out this procedure, it is essential that the technician is completely familiar with the equipment and all its detail. It is recommended good practice that all refrigerants are recovered safely.

Prior to the task being carried out, an oil and refrigerant sample shall be taken in case analysis is required prior to re-use of reclaimed refrigerant. It is essential that electrical power is available before the task is commenced.

- a) Become familiar with the equipment and its operation.
- b) Isolate system electrically.
- c) Before attempting the procedure ensure that: Mechanical handling equipment is available, if required, for handling refrigerant cylinders; all personal protective equipment is available and being used correctly; the recovery process is supervised at all times by a competent person; recovery equipment and cylinders conform to the appropriate standards.
- d) Pump down refrigerant system, if possible.
- e) If a vacuum is not possible, make a manifold so that refrigerant can be removed from various parts of the system.
- f) Make sure that cylinder is situated on the scales before recovery takes place.
- g) Start the recovery machine and operate in accordance with manufacturer's instructions.
- h) Do not overfill cylinders. (No more than 80 % volume liquid charge).
- i) Do not exceed the maximum working pressure of the cylinder, even temporarily.
- j) When the cylinders have been filled correctly and the process completed, make sure that the cylinders and the equipment are removed from site promptly and all isolation valves on the equipment are closed off.
- k) Recovered refrigerant shall not be charged into another refrigeration system unless it has been cleaned and checked.

### **14.Labelling**

Equipment shall be labelled stating that it has been de-commissioned and emptied of refrigerant. The label shall be dated and signed. Ensure that there are labels on the equipment stating the equipment contains flammable refrigerant.

### **15.Recovery**

When removing refrigerant from a system, either for servicing or decommissioning, it is recommended good practice that all refrigerants are removed safely. When transferring refrigerant into cylinders, ensure that only appropriate refrigerant recovery cylinders are employed. Ensure that the correct number of cylinders for holding the total system charge is available. All cylinders to be used are designated for the recovered refrigerant and labelled for that refrigerant (i.e. special cylinders for the recovery of refrigerant). Cylinders shall be complete with pressure relief valve and associated shut-off valves in good working order. Empty recovery cylinders are evacuated and, if possible, cooled before recovery occurs. The recovery equipment shall be in good working order with a set of instructions concerning the equipment that is at hand and shall be suitable for the recovery of the flammable refrigerant. If in doubt, the manufacturer should be consulted. In addition, a set of calibrated weighing scales shall be available and in good working order. Hoses shall be complete with leak-free disconnect couplings and in good condition.

The recovered refrigerant shall be processed according to local legislation in the correct recovery cylinder, and the relevant waste transfer note arranged. Do not mix refrigerants in recovery units and especially not in cylinders. If compressors or compressor oils are to be removed, ensure that they have been evacuated to an acceptable level to make certain that flammable refrigerant does not remain within the lubricant. The compressor body shall not be heated by an open flame or other ignition sources to accelerate this process. When oil is drained from a system, it shall be carried out safely.

## Operation of Current Device

The power supply cord contains a current measuring device that detects damage to the power cord. Test your power supply cord as follows:

1. Plug in the air conditioner.
2. The power supply cord will have TWO buttons on the plug head. Press the TEST button. You will notice a click as the RESET button pops out.
3. Press the RESET Button. You will notice a click as the button engages.
4. The power supply cord is now supplying electricity to the unit. (On some products this is also indicated by a light on the plug head.)

### NOTE

The power supply cord with this air conditioner contains a current detection device designed to reduce the risk of fire.

In the event that the power supply cord is damaged, it can not be repaired. It must be replaced with a cord from the manufacturer.

### NOTE

- Do not use this device to turn the unit on or off.
- Always make sure the RESET button is pushed in for correct operation.
- The power supply cord must be replaced if it fails to reset when either the TEST button is pushed, or it can not be reset. Please contact Customer Service.

### Grounding type wall receptacle

Power supply cord with 3-prong grounding plug and current detection device.

# PRODUCT INSTALLATION

## Choosing the Right Location

Your installation location should meet the following requirements:

- Make sure that you install your unit on an even surface to minimize noise and vibration.
- The unit must be installed near a grounded plug, and the Collection Tray Drain (found on the back of the unit) must be accessible.
- The unit should be located at least 9.8" (25cm) from the nearest wall to ensure proper air conditioning.
- DO NOT cover the Intakes, Outlets or Remote Signal Receptor of the unit, as this could cause damage to the unit.

Fig. 1

## Recommended Installation

### NOTE

All the illustrations in the manual are for explanation purpose only. Your machine may be slightly different.

### WARNING

- This air-conditioning unit is a hermetically sealed unit that contains fluorinated gasses. For specific information on the type of gas and the amount, please refer to the relevant label on the unit itself.
- Service, maintenance or repair of this unit must be performed by a certified technician.
- Product recycling must be done according to local regulations.

Scan this QR code to watch an installation video for your Midea Duo Portable Air Conditioner:

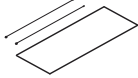

Fig. 2

## Tools You Will Need

- Phillips screwdriver
- Tape measure or ruler
- Knife or scissors
- Saw (optional, to shorten window adaptor for narrow windows).

## Accessories

Your Window Installation Kit fits windows 19.1" - 63.8" (48.4-162 cm). Please doublecheck all packaging materials to make sure accessories do not get accidentally thrown away.

| Part  | Description  | Quantity |
|---|--|----------|
|    | Air exhaust adapter  | 1 pc     |
|    | Bolt   | 8 pc     |
|    | Window Sliders   | 5 pc     |
|    | Window Kit Brace   | 1 pc     |
|    | Sliding Window Adapter - Front                             | 1 pc     |
|   | Sliding Window Adapter - Rear                              | 1 pc     |
|  | Sliding Window Adapter - Air Divider                       | 1 pc     |
|  | Foam seal A (adhesive)                                     | 4 pc     |
|  | Foam seal B (adhesive)                                     | 2 pc     |
|  | Foam seal C (Non-adhesive)                                 | 2 pc     |
|  | Window Slider Foam (adhesive)                              | 2 pc     |
|  | Security bracket and 2 screws                              | 1 set    |
|  | Drain hose   | 1 pc     |
|  | Drain hose adaptor (For heat pump mode only)               | 1 pc     |
|  | Remote controller and battery                              | 1 set    |
|  | Power Cord Buckle (For cooling only model)                 | 1 pc     |
|  | Heat pump hose insulation foam (For heat pump models only) | 1 set    |
|  | 1 Screw (on Exhaust adaptor)                               | 1 pc     |

# Window Installation Kit

## Preparing the adjustable window slider

1. Depending on the size of your window, adjust the size of the window slider. Use the combination of panels that best fits your window opening.
2. If the length of the window requires two or more window sliders, use the bolt to fasten the window sliders once they are adjusted to the proper length.

Use the table below to determine what combination of window sliders is correct for your window:

| window slider | window dimension (mm) |        | window dimension (inch) |        |
|---------------|-----------------------|--------|-------------------------|--------|
| a+b           | 484                   | ~ 592  | 19.1                    | ~ 23.3 |
| b+c           | 592                   | ~ 696  | 23.3                    | ~ 27.4 |
| a+b+c         | 696                   | ~ 802  | 27.4                    | ~ 31.6 |
| b+e           | 802                   | ~ 896  | 31.6                    | ~ 35.3 |
| a+b+e         | 896                   | ~ 998  | 35.3                    | ~ 39.3 |
| a+b+c+d       | 998                   | ~ 1210 | 39.3                    | ~ 47.6 |
| a+b+c+d+e     | 1210                  | ~ 1620 | 47.6                    | ~ 63.8 |

Fig. 3

3. If installing in a sliding window, bolts should be installed on both sides of the window sliders.

Fig. 4

## 3: Applying insulation to the window slider

After assembling the window slider to your proper dimension, cut and apply the foam insulation sheets to the exterior side of the window slider.

### NOTE

Once the Exhaust Hose assembly and Adjustable Window Slider are prepared, choose from one of the following two installation methods.

Fig. 5

## Type 1: Hung window installation

### 1: For Hung Window types only

Insert the Air Exhaust Adapter into the exhaust of the hose (the circular opening) for optimal performance. Rotate the adapter clockwise until the locking tabs click and it no longer rotates.

Skip this step if installing into a horizontal sliding window.

The Air Exhaust adapter may interfere with some window screens, and can be removed if desired (Please note this may slightly decrease performance).

Fig. 6

2. Cut the adhesive foam seal A and B strips to the proper lengths, and attach them to the window sash and frame as shown.

Fig. 7

3. Insert the window slider assembly into the window track. If the hose opening is covered by the lip of the window frame, rotate the panel so the thicker side faces the window frame. Attach the Window Kit Brace to the back of the hose panel to brace against the window so the window slider panels do not lean inward.

Fig. 8

4. Cut the non-adhesive foam seal C strip to match the width of the window. Insert the seal between the glass and the window frame to prevent air and insects from getting into the room.

Fig. 9

- If desired, install the security bracket with 2 screws as shown.

- Attach the hose to the window slider panel by inserting the end of the hose into the opening on the slider.

### Type 2: Sliding window Installation (Optional)

- Assembling the Sliding Window Adapter (Only needed for Sliding Window applications): Align both halves of the sliding window adapter and connect them. Then, attach the air divider to the newly formed window adapter on the outdoor side. The fully assembled adapter should look like the image at the left. (attach the adapter to the hose ).

- Cut the adhesive foam seal A and B strips to the proper lengths, and attach them to the window sash and frame as shown.

3. Insert the window slider assembly into the window track. If the hose opening is covered by the window frame, rotate the panel so the thicker side faces the window frame. Attach the Window Kit Brace to the back of the hose panel to brace against the window so the window slider panels do not lean inward.
4. Be sure bolts are installed in both sides of the window slider for improved rigidity.

Fig. 14

5. Cut the non-adhesive foam seal C strip to match the window height. Insert the foam seal between the glass and the window frame to prevent air and insects from getting into the room.

Fig. 15

6. If desired, install the security bracket with 2 screws as shown.

Fig. 16A

Fig. 16B

7. Insert the window slider adapter into the hole of the window slider.

Fig. 17

## NOTE

To ensure proper function, DO NOT overextend or bend the hose. Make sure that there are no objects within 20in (~500mm) of the inlet and outlet hose.

All illustrations in this manual are for explanation purposes only, your air conditioner may be slightly different than shown.

Fig. 18

## Water Drainage

- During Dry modes, remove the upper drain plug from the back of the unit and install the drain hose.

For models without drain connector, just attach the drain hose to the hole. Place the end of the hose directly in the drain area you're using.

Fig. 19

## Water Drainage (For Heating Mode)

- While operating in heat pump mode, the unit will produce condensate that must be drained. You must install the drain hose when operating in heat mode. To install the drain hose, remove the plug from the drain port and attach the included hose. The universal drain adaptor can be attached to the end of the included hose. A 3/4" hose (not included) can be attached to the adaptor if a longer hose length is required. Place the end of the hose in the drain area you are using.

## NOTE

Because this unit contains a condensate pump, the drain hose can be elevated up to 6 ft. (1.8 m). Direct the hose toward the drain, making sure there are no kinks that will restrict water flow. Make sure the end of the hose is directed downward (see fig. ✓ with check mark symbol).

The figure with (X) symbol is not recommended as the end of the hose is not directed downward. When the continuous drain hose is not used, ensure that the corresponding drain plug and knob are installed firmly to prevent leaks.

Fig. 20

## Water Drainage (For Heating Mode) cont.

Fig. 21

- When the water level of the bottom tray reaches a predetermined level, the unit beeps 8 times. The digital display shows "P1." At this time the air conditioning/dehumidification process will immediately stop. However, the fan motor will continue to operate (this is normal). Carefully move the unit to a drain location, remove the bottom drain plug and let the water drain away. Reinstall the bottom drain plug and restart the machine until the "P1" symbol disappears. If the error repeats, call for service.

### NOTE

Be sure to reinstall the bottom drain plug firmly to prevent leakage before using the unit.

Remove the bottom drain plug to drain the water away.  
Fig. 22

## Heat Pump Hose Insulation Foam

If you are experiencing condensation on the outer section of the hose during heating operation, apply the included heat pump insulation foam to the outside of the hose. Use the included zip ties to secure the foam around the hose.

Fig. 23

# OPERATION INSTRUCTIONS

## Unit Operating Temperature Range:

| Mode      | Temperature Range ( <i>outdoor</i> ) |
|-----------|--------------------------------------|
| Cool      | 60°F ~ 95°F (16°C ~ 35°C)            |
| Dry       | 55°F ~ 95°F (13°C ~ 35°C)            |
| Heat Pump | 41°F ~ 86°F (5°C ~ 30°C)             |

# Control Panel Features

|   |  | Description   |
|---|--|---|
| 1 |  | ON / OFF<br>• Press to turn unit on or off.   |
| 2 |  | Sleep Function<br>• Press to initiate the sleep mode.   |
| 3 |  | Fan Speed<br>• Press to select the Fan Speed in five steps - Cont., Auto, Low, Med or High.                                     |
| 4 |  | UP / DOWN Button<br>• Press to change temperature setting.  |
| 5 |  | Mode Functions<br>• Press to choose operating mode in a sequence that goes from Auto, Cool, Dry, Fan and Heat (on some models). |
| 6 |  | Timer Feature<br>• Press to turn unit Auto Start/Stop.  |
| 7 |  | Swing / Connect Feature<br>• Press to initiate the auto swing feature.<br>• Press for 3 sec to initiate smart connection mode.  |

## 1. POWER BUTTON (ON/OFF):

Press Power button to turn unit on or off.

## 2. SLEEP BUTTON:

Pressing this button will increase (during cooling operation) or decrease (during heating operation, applicable models) 2°F/1°C after 30 minutes. The temperature will again increase (cooling) or decrease (heating) by another 2°F/1°C after an additional 30 minutes. This new temperature will be maintained for 7 hours before returning to the originally selected temperature. This ends the Sleep mode and the unit will continue to operate as originally programmed.

### NOTE

The SLEEP operation feature is unavailable in FAN or DRY mode.

## 3. FAN BUTTONS:

Controls the fan speed. Press to control the fan speed in four steps - LOW, MID, HIGH and AUTO. The selected fan speed light (except AUTO) will illuminate.

### NOTE

Applicable to models with the Constant Fan feature. In COOL or DRY mode, press the Fan button for 3 seconds to turn on or off the constant fan function. When the function is turned on, the constant fan light will illuminate, indicating the fan will run constantly. When the function is turned off, the constant fan light will go out, indicating that the fan will stop when the compressor stops.

## 4. UP (^) AND DOWN (v) BUTTONS:

Used to increase/decrease temperature settings in 1° increments in a range of 60°F/16°C to 86°F/30°C or the TIMER setting in a range of 0 ~ 24hrs.

### NOTE

To change between °F or °C, simultaneously press and hold the Up and Down buttons for 3 seconds.

## 5. MODE BUTTON:

Selects the desired operating mode. Each time you press the button, a mode is selected in a sequence that goes from AUTO, COOL, DRY, FAN and HEAT (Heat models only). The mode light illuminates and indicates the selected mode.

### COOL Operation

- Press the "MODE" button until the "COOL" indicator light comes on.
- Press the ADJUST buttons Up or Down to select your desired room temperature. The temperature can be set within a range of 60°F-86°F/16°C-30°C.
- Press the "FAN SPEED" button to choose the fan speed.

### HEAT Operation (*on some models*)

- Press the "MODE" button until the "Heat" indicator light comes on.
- Press the ADJUST buttons Up or Down to select your desired room temperature. The temperature can be set within a range of 60°F-86°F/16°C-30°C.
- Press the "FAN SPEED" button to choose the fan speed.
- When entering heat mode, the fan may start slower than expected. For some models, the fan speed cannot be adjusted while in HEAT mode.

### DRY Operation

- Press the "MODE" button until the "DRY" indicator light comes on.
- While in this mode, you cannot select a fan speed. The fan motor operates at AUTO speed.
- Keep windows and doors closed for the best dehumidifying effect.

### AUTO Operation

- When you set the air conditioner to AUTO mode, it will automatically select cooling, heating (Heat models only) or fan only operation depending on what temperature you have selected and the current room temperature.
- The air conditioner will control room temperature automatically according to the temperature point set by you.
- Under AUTO mode, you cannot select the fan speed.

### FAN Operation

- Press the "MODE" button until the "FAN" indicator light comes on.
- Press the "FAN SPEED" button to choose the fan speed. The temperature cannot be adjusted.
- Do not connect the duct to a window.

## Operating Instructions

### 6. TIMER BUTTON:

Used to initiate the AUTO ON start time and AUTO OFF stop time program. The timer on or off light will illuminate depending on the selected setting.

#### TIMER: Auto Start/Stop Operation

- When the unit is on, pressing the Timer button will initiate the Auto stop program. The TIMER OFF indicator light illuminates. Press the Up (^) or Down (v) button to select the desired time. Press the TIMER button again within 5 seconds. The Auto start program is initiated and the TIMER ON indicator light illuminates. Press the Up (^) or Down (v) button to select the desired Auto start time.
- When the unit is off, press the Timer button to initiate the Auto start program. Pressing it again within five seconds will initiate the Auto stop program.
- Press or hold the Up (^) or Down (v) button to change the Auto time by 0.5 hour increments, up to 10 hours, then at 1 hour increments up to 24 hours. The control will count down the time remaining until start.
- The system will automatically revert back to display the previous temperature setting if there is no operation within 5 seconds.
- Turning the unit ON or OFF at any time or adjusting the timer setting to 0.0 will cancel the Auto Start/Stop timer program.
- Should a malfunction occur, the Auto Start/Stop timed program will also be cancelled.

### 7. SWING BUTTON:

Used to initiate the Auto Swing feature. When the operation is ON, pressing the SWING button can stop the louver at the desired angle.

The swing button is also used to initiate the wireless connection mode. To initiate the wireless connection mode, power on the air conditioner then press the SWING button for 3 seconds. The LED DISPLAY will show 'AP' to indicate the unit is in wireless connection mode. Refer to the app connection instructions to finish the connection process. If the connection is successful, the unit will exit wireless connection mode and illuminate the wireless LED. If the connection fails, the unit will exit wireless connection mode automatically after 8 minutes and the wireless LED does not illuminate.

#### NOTE

The wireless connection process must be completed within 8 minutes after powering the air conditioner on.

## LED Display

Shows the set temperature in °F (Degrees Fahrenheit) or °C (Degrees Celsius) and the Auto-timer settings. While on DRY and FAN modes, it shows the room temperature.

Shows Error codes and protection code:

**E1** - Room temperature sensor error.

**E2** - Evaporator temperature sensor error.

**E3** - Condenser temperature sensor error (select models).

**E4** - Display panel communication error.

**P1** - Bottom tray is full - Connect the drain hose and drain the collected water away. If protection code repeats, call for service.

### NOTE

When one of these error codes occurs, turn off the unit and check for any obstructions. Restart the Unit. If the malfunction persists, turn off the unit and unplug the power cord and contact customer service at 1-866-646-4332.

## Other Features

### COMFORT SENSE FEATURE

This feature can ONLY be activated from the remote control. The remote control serves as a remote thermostat allowing for the precise temperature control at its location, which must be within 26 feet of the air conditioner. To activate the Comfort Sense feature, point the remote control towards the unit and press the SET button to select. The remote's display will show the actual temperature at its location (as long as it is within the 26 feet of the air conditioner). The remote control will send this signal to the air conditioner every 3 minutes until the C-Sense button is select again. If the unit does not receive the Comfort Sense signal during any 7 minutes interval, the unit will exit the Comfort Sense mode.

### NOTE

This feature is unavailabe under FAN or DRY mode.

### AUTO-RESTART

If the unit shuts off unexpectedly due to a power outage, it will restart with the previously set function automatically when the power resumes.

### WAIT 3 MINUTES BEFORE RESUMING OPERATION

After the unit has stopped, it cannot be restarted until 3 minutes time has elapsed. This is to protect the unit. Operation will automatically resume after 3 minutes.

# REMOTE CONTROL AND APP INSTRUCTIONS

## Handling the Remote Control

### LOCATION OF THE REMOTE CONTROL

Use the remote control within a distance of 26 ft. (8m) from the air conditioner, pointing it towards the unit. The unit will beep when it receives a signal.

### CAUTION

- The air conditioner will not operate if curtains, doors or other materials block the signals from the remote control to the unit.
- Prevent any liquid from spilling onto the remote control. Do not expose the remote control to direct sunlight or heat.
- If the infrared signal receiver on the indoor unit is exposed to direct sunlight, the air conditioner may not function properly. Use curtains to prevent the sunlight from falling on the receiver.
- If other electrical appliances react to the remote control, either move these appliances or consult your local dealer.

## Inserting and Replacing Batteries

Your air conditioning unit may come with two batteries AAA (some units). Put the batteries in the remote control before use.

1. Slide the back cover from the remote control downward, exposing the battery compartment.
2. Insert the batteries, paying attention to match up the (+) and (-) ends of the batteries with the symbols inside the battery compartment.
3. Slide the battery cover back into place.

### BATTERY NOTES

For optimum product performance:

- Do not mix old and new batteries, or batteries of different types.
- Do not leave batteries in the remote control if you don't plan on using the device for more than 2 months.

### BATTERY DISPOSAL

Ensure used batteries are disposed of properly.

### TIPS FOR USING REMOTE CONTROL

In order to properly transmit a command, the ON/OFF indicator must be illuminated on the remote's display. (See the Remote LED Screen Indicators section for more information.)

## Remote Control Specifications

|                        |                                       |
|------------------------|---------------------------------------|
| Model                  | RG10F2(B2)/BGEFU1, RG10F3(B2)/BGCEFU1 |
| Rated Voltage          | 3.0V ( Dry batteries R03/LR03x2)      |
| Signal Receiving Range | 26 ft (8 m)                           |
| Environment            | -5°C ~ 60°C (23°F ~ 140°F)            |

## Function Buttons

Model: RG10F2(B2)/BGEFU1  
RG10F3(B2)/BGCEFU1

# Remote Screen Indicators

**Note:**

All indicators shown in the figure are for the purpose of clear presentation. But during the actual operation, only the relative function signs are shown on the display window.

## Setting the TIMER

### TIMER ON/OFF

Set the amount of time after which the unit will automatically turn on/off.

#### TIMER ON SETTING

Press TIMER ON button to initiate the ON time sequence.

Press up or down button for multiple times to set the desired time to turn on the unit.

Point remote to unit and wait 1sec, the TIMER ON will be activated.

#### TIMER OFF SETTING

Press TIMER OFF button to initiate the OFF time sequence.

Press up or down button for multiple times to set the desired time to turn off the unit.

Point remote to unit and wait 1sec, the TIMER OFF will be activated.

#### NOTE

1. When setting the TIMER ON or TIMER OFF, the time will increase by 30 minutes increments with each press, up to 10 hours. After 10 hours and up to 24, it will increase in 1 hour increments. (For example, press 5 times to get 2.5h, and press 10 times to get 5h,). The timer will revert to 0.0 after 24.
2. Cancel either function by setting its timer to 0.0h.

## TIMER ON & OFF SETTING (example)

Keep in mind that the time periods you set for both functions refer to hours after the current time.

Example: If current time is 1:00PM, to set the timer as above steps, the unit will turn on 2.5h later (3:30PM) and turn off at 6:00PM.

## Declaration of Conformity

We hereby declare that this AC is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC.

## Specification of Wireless Module

# 1 How to use SmartHome App

⚠️ Ensure that your mobile phone is connected to the wireless network. Bluetooth must be turned on. The device must also be powered up.

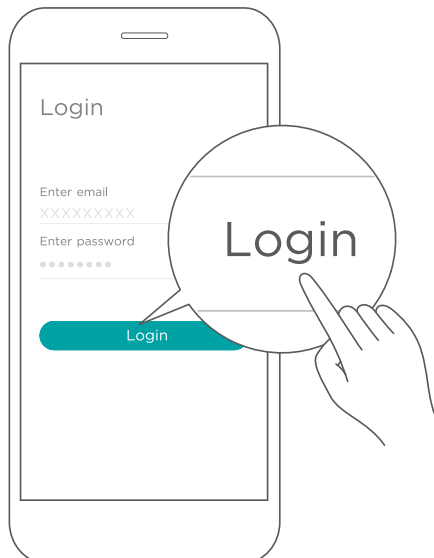

## ■ Step 1: Download the SmartHome app

Scan the QR code below to download the SmartHome app from app store or search for it directly on the Google Play Store or Apple's App Store.

## ■ Step 2: Log in

Open the SmartHome app. Log in directly if you have an existing SmartHome account or create a new account. Alternatively, you can also use a 3rd party login platform.

### ■ Step 3: Connecting the device

1) When you log in, you may see the message "Smart devices discovered nearby". Tap to add your device.

2) If no such message appears, proceed as follows: Tap on "+" and select your device in the list of nearby available devices.  
If your device is not listed, please add your device manually, first selecting the device category e.g. Window AC.

3) Follow the steps in the app to connect your device to the wireless network. If your device fails to connect, follow the additional instructions in the app.

For Window AC

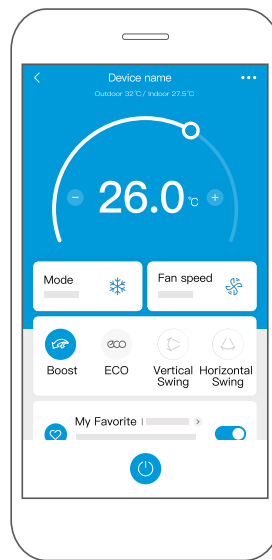

For Portable AC

#### ■ Step 4: Controlling the device

After pairing successfully, a card will be created for the device in the SmartHome app. Shortcuts for basic functions will appear on the card such as changing the temperature or switching the device on or off.

Tapping on the card, will reveal additional features and settings. The actual UI design may look different from examples due to app updates.

## 2 How to use Matter

Matter is a connectivity technology that unifies the smart home by allowing devices and ecosystems (such as Alexa, Google Home and Apple Home) to speak the same language thus creating exciting new features and use cases.

To use Matter, you will need at least one Matter enabled smart speaker from Amazon, Google or Apple, and it's respective app.

-- If you have a Matter enabled smart speaker, please proceed to the "How to use Matter" instructions on the following pages.

-- If you don't have a Matter enabled smart speaker, you won't be able to use Matter right now. However, you can still achieve full functionality of the product by using our SmartHome app. To do this, proceed to the "How to use SmartHome app" section back on page 1.

### Connect Your Air Conditioner through Matter

⚠ Make sure your mobile device is connected to your wireless router.

Wireless router should support and turn on IPv6. Please make sure your smartphone connect to 2.4G but not 5G network.

For best Matter compatibility, connect the AC to the Alexa, Google Home or Apple Home ecosystems along with at least one of their respective Matter enabled smart speakers.

#### ■ Step 1: Connect to smart speaker

Select your preferred ecosystem (Alexa, Google Home or Apple Home) and make sure you've got one of their Matter enabled products (such as their smart speakers) connected to your wireless router.

## ■ Step 2: Turn on Bluetooth

Turn on Bluetooth on your mobile device.

## ■ Step 3: Enter AP mode

Window AC: Hold down the CONNECT / Power button for 3 seconds to begin the pairing process ("AP" will appear on the AC's display).

Portable AC: Hold down the SWING / Power button for 3 seconds to begin the pairing process ("AP" will appear on the AC's display).

Note: Entering AP pairing mode may vary between different AC, please follow instruction of AC panel.

Window AC

Portable AC

#### ■ Step 4: Open app

Open the Alexa, Google Home, Apple Home app on your mobile device.

#### ■ Step 5: Scan matter QR code

Tap the “+” and “Add Device/Accessory” or tap “+Add” in your app and then select Matter device and scan the Matter QR code found on the side of the AC device. Follow the respective instructions in the Alexa, Google Home or Apple Home app to complete the pairing process.

## ■ Step 6: Control device

After pairing is successful, you can control your AC's temperature and mode settings, etc. through the respective ecosystem app and smart speaker.

Due to a compatibility issue, the temperature value shown in the Alexa, Google Home or Apple Home app may be 1 degree different from that displayed on the air conditioner. However, this will not impact the device's ability to cool the room.

**App & Smart Speakers can support Matter only when using these versions or above.**

| Device            | Version  |
|-------------------|--|
| iPhone            | iOS 16.5   |
| Apple Home Pod    | 16.5   |
| Android           | Google Play services min version: 22.36.15<br>Google Home app (GHA) min version: 2.58.24.1-dogfood |
| Google Home Hub   | Google Hub firmware min version: 1.56.324896<br>(appears on hub as Chromecast firmware version)    |
| Alexa App         | 2.2.536317   |
| Alexa Echo Device | 9094439556   |

**NOTE:**

- Setup processes and features may vary between ecosystems.
- The functions shown in the Alexa, Google Home or Apple Home apps may change with updates to their products or apps.
- Make sure the Matter enabled app is up to date to ensure the best experience.
- Periodically, we will update the device’s software to improve the experience. Device software updates can be accomplished through the SmartHome app.
-  matter is developed by the Connectivity Standards Alliance TM. This brand, related logos, and marks are trademarks of the Alliance, all rights reserved.
- Use of the Works with Apple badge means that an accessory has been designed to work specifically with the technology identified in the badge and has been certified by the developer to meet Apple’s performance standards. Apple is not responsible for the operation of this device or its compliance with safety and regulatory standards.

## ■ Declaration of conformity

**FCC ID: 2ADQOMDNA23**

**IC: 12575A-MDNA23**

This device complies with Part 15 of the FCC Rules and Industry Canada's licenceexempt RSSs.

Operation is subject to the following two conditions:

- (1) This device may not cause interference;and
- (2) This device must acceptany interference,including interference that may cause undesired operation of the device.

Only operate the device in accordance with the instructions supplied. Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.This device complies with FCC radiation exposure limits set forth for an uncontrolled environment. In order to avoid the possibility of exceeding the FCC radio frequency exposure limits, human proximity to the antenna shall not be less than 20cm (8 inches) during normal operation.

### **NOTE:**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Hereby, we declare that this AC is in compliance with the essential requirements and other relevant provisions of RE Directive 2014/53/EU. A copy of the full DoC is attached (European Union products only).

# CLEANING AND MAINTENANCE

## Safety Precautions

- Always unplug the unit before cleaning or servicing.
- DO NOT use flammable liquids or chemicals to clean the unit.
- DO NOT wash the unit under running water. Doing so causes electrical danger.
- DO NOT operate the machine if the power supply was damaged during cleaning. A damaged power cord must be replaced with a new cord from the manufacturer.

## Air Filter Cleaning

### Maintenance Tips:

- Be sure to clean the air filter every 2 weeks for optimal performance.
- Clean the filter using water and ensure it is dry before reinstalling.
- The water collection tray should be drained immediately after P1 error occurs, and before storage to prevent mold.
- In households with animals, you will have to periodically wipe down the grill to prevent blocked airflow due to animal hair.
- Notice the air filter is integrated with the removable grille cover.

### CAUTION

DO NOT operate the unit without filter because dirt and lint will clog it and reduce performance.

## Unit Cleaning

Clean with a soft cloth only. Do not use strong detergents that contain wax or thinners as it may damage the product

## Store the Unit When Not in Use

- Drain the unit's water collection tray according to the instructions in the following section.
- Run the unit on FAN mode for 12 hours in a warm room to dry it and prevent mold.
- Turn off the unit and unplug it.
- Clean the air filter according to the instructions in the previous section. Reinstall the clean, dry filter before storing.
- Remove the batteries from the remote control.

### NOTE

- Be sure to store the unit in a cool, dark place. Exposure to direct sunlight or extreme heat can shorten the lifespan of the unit.

# TROUBLESHOOTING TIPS

Before calling for service, review this list. It may save you time and expense. This list includes common occurrences that are not the result of defective workmanship or materials in this appliance.

| Problem   | Solution   |
|---|--|
| Unit does not turn on when pressing ON/OFF button.                    | Displays P1 Error Code and means the water collection tray is full. Turn off the unit, drain the water from the water collection tray, and restart the unit. |
|   | If room temperature is lower than the set temperature in COOL mode, reset the temperature.   |
| Unit does not cool well.  | The air filter is blocked with dust or animal hair. Turn off the unit and clean the filter according to the instructions.                                    |
|   | Exhaust hose is not connected or is blocked. Turn off the unit, disconnect the hose, check for blockage and reconnect the hose.                              |
|   | Temperature setting is too high; decrease the set temperature.   |
|   | Make sure all windows and doors are closed.  |
|   | The room area could be too large; double-check the cooling area.   |
| The unit is noisy and/or vibrates too much                            | Check the room for possible heat sources and remove them if possible.  |
|   | The floor is not level. Place the unit on a flat, level surface.   |
| The unit makes a gurgling sound.                                      | The air filter is blocked with dust or animal hair. Turn off the unit and clean the filter according to the instructions.                                    |
|   | This sound is caused by the refrigerant flow inside the unit and is normal.  |
| Unit will not connect to Wireless or App does not work (some models). | For additional support and troubleshooting tips, visit the “Help” tab within the SmartHome app.  |
| The top of the window kit leans forward out of the window track.      | Ensure the Window Kit brace is installed properly.   |
| In heating mode, the fan speed is lower than expected.                | It is normal for the fan speed to start low in heating mode. The fan speed should reach your desired setting after a few minutes of operation.               |
| Condensation collects on the outer section of the hose in heat mode.  | Apply the included hose insulation foam as shown on the next page.   |

## NOTE

Do not add extension to the exhaust hose(s)!

# WARRANTY

## Air Conditioner Limited Warranty

Your product is protected by this Limited Warranty:

Warranty service must be obtained from Midea Consumer Services or an authorized Midea servicer.

---

### Warranty

- Two years limited warranty from original purchase date.

### Midea, through its authorized servicers will:

- Pay all costs for repairing or replacing parts of this appliance which prove to be defective in materials or workmanship.

### Consumer will be responsible for:

- Diagnostics, removal, transportation and reinstallation cost required because of service.
- Costs of service calls that are a result of items listed under NORMAL RESPONSABILITIES OF THE CONSUMER\*\*

Midea replacement parts shall be used and will be warranted only for the original warranty.

---

### NORMAL RESPONSABILITIES OF THE CONSUMER\*\*

**This warranty applies only to products in ordinary household use, and the consumer is responsible for the items listed below:**

1. Proper use of the appliance in accordance with instructions provided with the product.
2. Routine maintenance and cleaning necessary to keep the good working condition.
3. Proper installation by an authorized service professional in accordance with instructions provided with the appliance and in accordance with all local plumbing, electrical and/or gas codes.
4. Proper connection to a grounded power supply of sufficient voltage, replacement of blown fuses, repair of loosen connections or defects in house wiring.
5. Expenses for making the appliance accessible for servicing.
6. Damages to finish after installation.

### EXCLUSIONS

**This warranty does not cover the following:**

- 1) Failure caused by damage to the unit while in your possession (other than damage caused by defect or malfunction), by its improper installation, or by unreasonable use of the unit, including without limitation, failure to provide reasonable and necessary maintenance or to follow the written installation and Operating Instructions.
- 2) Damages caused by services performed by persons other than those authorized by Midea customer service; or external causes such as abuse, misuse, inadequate power supply or acts of God.
- 3) If the unit is put to commercial, business, rental, or other use or application other than for consumer use, we make no warranties, express or implied, including but not limited to, any implied warranty of merchantability or fitness for use or purpose.
- 4) Products without original serial numbers or products that have serial numbers which have been altered or cannot be readily determined.

**NOTICE: Some states do not allow the exclusions or limitation of incidental or consequential damages. So this limitation or exclusion may not apply to you.**

### IF YOU NEED SERVICE

Keep your bill of sale, delivery slip, or some other appropriate payment Record.

The date on the bill establishes the warranty period, should service be required.

If service is performed, it's your best interest to obtain and keep all receipts.

This written warranty gives you specific legal rights. You may also have other rights that vary from state to state.

Service under this warranty must be obtained by following these steps, in order:

- 1) Contact Midea Consumer Services or an authorized Midea services at 1 866 646 4332.
- 2) If there is a question as to where to obtain service, contact our consumer relations Department.

## **Important Safety Instructions of Power Supply Cord**

**▲ WARNING** To reduce the risk of the fire, electric shock, or injury to persons, read the **Important Safety Instructions of Power Supply Cord** before operating this appliance.

**▲ NOTE** The power supply cord with this air conditioner contains a current detection device designed to reduce the risk of fire. Please refer to the following section “Operation of Current Device” for details.

### **Operation of Current Device**

The power supply cord contains a current device that senses damage to the power cord. To test your power supply cord do the following:

1. Plug in the Air Conditioner.
2. The power supply cord will have TWO buttons on the plug head. Press the TEST button. You will notice a click as the RESET button pops out.
3. Press the RESET button. Again you will notice a click as the button engages.
4. The power supply cord is now supplying electricity to the unit. (On some products this is also indicated by a light on the head).

#### **NOTES:**

- Do not use this device to turn the unit on or off.
- Always make sure the RESET button is pushed in for correct operation.
- Press the RESET button when the Plug Current Device tripped and the air conditioner does not operate.
- The power supply cord must be replaced if it fails to reset when either the TEST button is pushed, or it cannot be reset. A new one can be obtained from the product manufacturer.
- If power supply cord is damaged, it CANNOT be repaired. It MUST be replaced by one obtained from the product manufacturer.

**▲ WARNING** Avoid fire hazard or electric shock. Do not use an extension cord or an adaptor plug. Do not remove any prong from the power cord.

## NOTES

- Button design is based on a typical model and may slightly vary from the actual one you purchased.
- This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
- This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
  - Reorient or relocate the receiving antenna.
  - Increase the separation between the equipment and receiver.
  - Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
  - Consult the dealer or an experienced radio/TV technician for help.
  - Changes or modifications not approved by the party responsible for compliance could void users authority to operate the equipment.

### **Battery Warning:**

Do not mix old and new batteries and Do not mix alkaline, standard (carbon-zinc) or rechargeable (ni-cad, ni-mh, etc.) batteries

### **Supplier's Declaration of Conformity 47 CFR § 2.1077 Compliance Information**

**Unique Identifier:** Midea RG10F2(B2)/BGEFU1, RG10F3(B2)/BGCEFU1
